

MDM56 PC

EXTERNAL 56K MODEM

MDM56 BO is an analog modem designed to be used with SATEL alarm control panels, which enables remote communication with them using the analog telephone line. The module can be connected to the control panel as an external modem, thus allowing the transmission rate to be increased up to 56 kbit/s. As a result, the device can be programmed at the same speed as when the PC computer is directly connected to the RS-232 port of the given control panel. For interaction with the computer, the **DLOAD10**, **DLOAD64**, **DLOADX**, **GUARD64** or **GUARDX** program is required. The device supports the ITU-T V.90, V.34, V.32bis, V.32., V.23, V.22bis, V.22, Bell 212A as well as v.21 and Bell 103 transmission protocols (the last two of them are used for communication with the control panel built-in modems). The modem is supplied with 12 V DC voltage, typical for control panels, which facilitates installation, because it can be powered from the same source as the control panel.

The MDM56 modem is available in three versions: **MDM56 BO**, without enclosure (to be used with the control panel) as well as two versions with a plastic enclosure: **MDM56 CA** (to be installed at INTEGRA and CA-64 control panels) and **MDM56 PC** (complete with a power supply unit, to be installed at the computer)

- optimized for communication with SATEL panels
- transmission speed up to 56 kbit/s
- powered by 12 V DC supply – typical for alarm panels
- AT command based configuration
- used on computer side

TECHNICAL DATA

Enclosure dimensions	125 x 114,5 x 31 mm
Operating temperature range	-10...+55 °C
Nominal supply voltage (±15%)	12 V DC
Standby mode current consumption	60 mA
Max. current consumption	110 mA
Weight	586 g

The actual appearance of the products may differ from the presented images. Product descriptions are provided in the web service for information purposes only.
