

PK-01

STANDALONE DOOR CONTROL MODULE

The PK-01 module is used for electronic control of doors wherever it is convenient to use this form of access and where there is no need to install a large system. The option of entry and exit authorization using a code or proximity card makes it a very versatile device: you just connect 12V external power supply and electromagnetic lock to get a fully functional configuration.

- user authorization by code or card
- support for up to 50 users
- module configuration from the keypad
- LEDs to indicate module status
- illuminated keys for easy operation in darkness
- built-in relay for direct control of bolt or lock
- totally enclosed for outdoor mounting on the outside

TECHNICAL DATA

| | |
|--|------------------|
| Dimensions | 47 x 158 x 24 mm |
| OC type outputs | 30 mA / 12 V DC |
| Relay outputs (resistive load) | 2 A / 24 V DC |
| Reader operating frequency | 125 kHz |
| Environmental class according to EN50130-5 | III |
| Maximum humidity | 93 ±3% |
| Max. current consumption | 125 mA |
| Weight | 297 g |
| Supply voltage | 12 V DC |
| Standby mode current consumption | 105 mA |
| Operating temperature range | -25...+55 °C |
